### A Mean, Green, Cleaning Machine

My DIY process went okay. It was surprisingly easy and cheap to find the ingredients I needed for the project, but I couldn't find any spare spray bottles at home so I had to keep the glass cleaner and all-purpose cleaner I made in regular bottles. I also couldn't find any Dr. Bronner's Castile Soap in the store near me, so I used a different brand. It was more concentrated than Dr. Bronner's, but it mixed into the water surprisingly well so I'm pretty sure that it will work the way it's supposed to. We cleaned recently in my house, so I didn't have anything to test the products on, but I can at least say that they smelled amazing!

**cerubia** Did you know that mixing bleach and vinegar can create chlorine gas, which can cause chemical burns? Yikes, right! This is just one of the many reasons why you should take charge of your cleaning routine and make your own cleaning supplies -- you'll know exactly what you're mixing together! Plus, by making your own supplies you can help the environment, since homemade cleaning supplies tend to be a lot more gentle on the Earth than store-bought ones. Here are a few quick and handy recipes you can use! #pgc2018 #greenclean #deletelater
