Illinois Central College

I recruited my friend Carolyn, she is the girl in the middle, to make her own PGC ripple. She took her friends to the Salvation Army to get used clothes, rather than going to a mall or clothing store. This helps live a more sustainable lifestyle, by staying away from fast fashion and buying used items.

I recruited Megan to start her own PGC ripple. She is going to come to my school on Monday and promote Young Living's Oil: Seed to Seal. Seed to Seal is essential oils where there are no additives used in obtaining the oil from the seeds to the sealed bottle. If the quality of the oil doesn't meet their high standards, then it is recycled onto their fields as a natural fertilizer/pesticide. These oils can be used for physical and emotional support. Her ripple effect is introducing the local college community to these natural supports and promote a sustainable lifestyle.

I recruited my friend Kelsie to do her own PGC ripple. She uses all-natural cleaners around her house and with the challenge, she has now decided to hold an online class on how to make and use all-natural cleaners to replace the toxic store-bought cleaners. She also said she is going to do a giveaway for a glass spray bottle to help promote reusable containers to hold cleaners. She plans on educating those in the class on the products that they currently use by introducing them to the ThinkDirty app, that allows people to scan their cleaning products to see the harsh and toxic chemicals that they're currently using.
