Rebecca Santiago-Recycling

This is one of my good friends, Rebecca. She was nice enough to send me this picture of her recycling in the library at my school. She has been improving her ability to care for the planet, and supporting me as well while doing so. Recycling is a great way to get started in your eco-journey. It's very simple, and is an easy adjustment to make to your lifestyle. Recycling creates so much less waste, and reduces the amount of pollution released into the atmosphere. It gives empty containers, or excess paper to become something more useful, and purposeful to someone else without creating excess waste to pollute the planet.

Rosalie Watkins & Donka R.-Composting

Rosalie & Donka were a huge help in my goal of composting more frequently. Here they are showing off the composting container. They have also been composting along with me for a while now. Rosalie appreciates this, because her family owns chickens, and those scraps are great for them. Composting is very beneficial, considering it reduces waste, and eventually creates carbon-restoring soil.

Sabira Ahmic-Organic Gardening

This is my mom, at our community garden, watering the plants. She is extremely dedicated to taking care of our garden plots, I'm so grateful. As a child, she grew up on freshly harvested, organic, seasonal foods each and every day. Growing these pesticide-free foods, reduces our exposure to carcinogens, and helps to protect the planet. We don't have to create pollution from imported goods, when growing our own food, as it's as local as it can get. We know exactly what's in our meals, and don't have to worry about artificial flavors harming us in any way.
