Jericho High School

Jennifer | Alice | Joanne | Richard

# Our Opinion:

## *Project Green*

---

### *Network*

A network would definitely be incredibly beneficial. Being able to exchange ideas and advice with people who are motivated, inspiring, and are leaders in their own communities would be a valuable resource for us. In addition, uniting all of our talents into working for a common goal -- making the Earth greener -- would make it much easier for us to leave a bigger impact on the world. People tend to listen when there is a united movement, versus one small group, however motivated, working alone. There is power in numbers!

# **Would you have an interest in joining or taking a leadership role in such a network bringing together student leaders from all over the world working for positive change?**

---

Yes! Each one of us would be incredibly honored and would love to join the network. If we could all join, we would each bring our own unique talents to the table in order to help environmental movements across the world, or even start our own.

We all think that a worldwide network will bring diversity and different opinions of environmental issues and conservation. More minds will also help solve problems more efficiently and in more interesting ways.

# How can we contribute?

## *Jennifer* team member #1

Jennifer is incredibly dedicated to science research, focusing especially on the fields of green technology.

She wants to decrease the usage of fossil fuels, through developing methods of renewable technology. A bit of a creative innovator, she'd love to work with other experts to create and test green technology. She's part of the school's science research program and has experience working in labs and conducting experiments. Her research could prove valuable to testing newer technologies.

# How can we contribute?

## Alice

team member #2

Alice wants to launch her own company someday. Always positive and ambitious, she's a kind, approachable, and likeable

person.

She wants to solve climate change for the betterment of the world, however she is also especially passionate and dedicated to protecting animals against habitat loss and their rights within industries, especially the food industry. She'd definitely fit the role of project manager, as she's a great leader who can motivate others to do work. She's also skillful when it comes to organizing and managing many things at once, and never seem to get too overwhelmed even when things look hopeless, always looking on the positive side of things.

# How can we contribute?

## Joanne

team member #3

Joanne's talent lies in writing and communications, and would love to increase awareness of these environmental issues through science magazines, newspapers, and more.

She's always loved books, testing out creative and nonfiction writing even as a young child. A firm believer in the power of the pen and paper, she can convince others to join our cause and bring together tons of people under one common banner to stop climate change. She's written an article for our school's environmental club and school newspaper, and plans to write more uncovering the devastating truth of our impact on climate change and what we can do to help.

# How can we contribute?

## *Richard*

team member #4

Richard is great at filming, writing scripts, music, and animation. A creative and outgoing individual, he loves public speaking, presenting, and creating.

He'd would love to have an outreach role in the network, especially because he's extremely passionate about ending climate change and is extremely talented at persuasion. He can create educational videos online, especially those related to science and promoting a environmental audience, which can help spread our message far and wide. He can compose jingles and tunes to help make outreach campaigns far more memorable, and he'd love to host community discussions to discuss ways to solve our current climate change fiasco.

## *How can we contribute? (cont.)*

And finally, we all are part of our school's science research program. We are dedicated to science, to learning more about our world and how to protect it. We are **not afraid** to get our hands dirty, go knocking doors, spread the word, and get people on the ground to start a grassroots, bottom up movement against climate change, as we are fighting for something we're **passionate** about. We're ready to spread the word and join a network of bold and empowered young leaders, and we will, together, help pressure those in power to take tangible action against climate change.

# *How can we contribute? (cont.)*

If we joined the program, we'd do more than roll up our sleeves. We'd bring the chalk, soap, and towel. Perhaps we may not be able to completely erase the environmental tragedies our planet has faced, but we can clear a path for change. In addition, we will make sure that the future we write for our generation, and future ones, will be better than the world we have now.

**“Do not look the other way; do not hesitate. Recognize that the world is hungry for action, not words. Act with courage and vision.”**

**~ Nelson Mandela**
